

Final Project Assessment

Deploy a WordPress on Kubernetes (using Minikube) with Helm and automation with Jenkins.

Prerequisites:

1. Install the necessary tools: Minikube, Helm and Jenkins.

First you need to install Minikube , here the official site and documentation for installation:

<https://minikube.sigs.k8s.io/docs/start/>

Here is the link to install Helm : <https://helm.sh/docs/intro/install/>

Here is the link to install Jenkins : <https://www.jenkins.io/doc/book/installing/linux/>

2. Separate repo in your GitHub Profile named: Final Project Assessment for Scalefocus Academy

Requirement for the Project Assessment:

1. Download Helm chart for WordPress. (Bitnami chart:

<https://github.com/bitnami/charts/tree/main/bitnami/wordpress>)

2. In values.yaml, you need to change line 543 from type: LoadBalancer to type: ClusterIP (Hint: there will be one more problem when deploying. Resolve it. – change the port forward for wordpress with a free port ,because port 8080 is used by Jenkins.

3. Create a Jenkins pipeline that checks if wp namespace exists, if it doesn't then it creates one.

Checks if WordPress exists, if it doesn't then it installs the chart.

I tried to create the pipeline but it gave an error every time:

```
pipeline {
```

```
    agent any
```

```
    environment {
```

```
        KUBECONFIG = '/var/lib/jenkins/.kube/config'
```

```
    }
```

```
    stages {
```

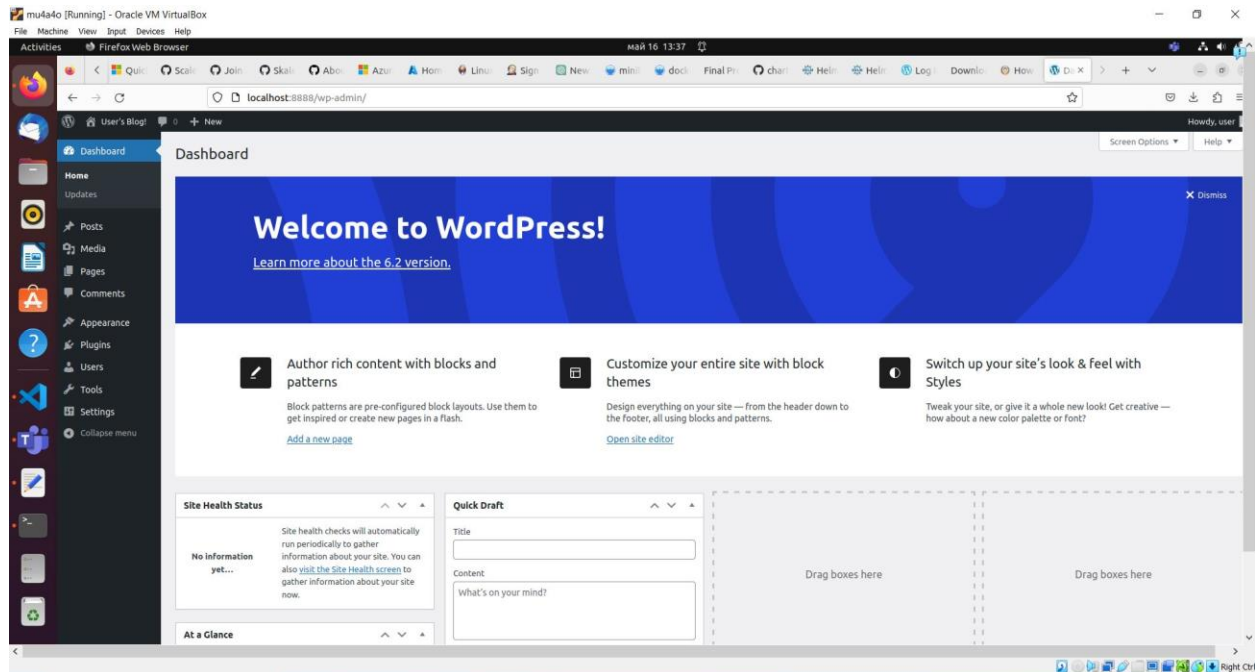

```
        stage('Namespace') {
```

```
steps {  
  script {  
    def namespaceExists = sh(script: 'kubectl get namespace wp', returnStatus: true) == 0  
  
    if (namespaceExists) {  
      echo 'Namespace wp exists'  
      return  
    } else {  
      echo 'Creating wp namespace'  
      sh 'kubectl create namespace wp'  
    }  
  }  
}  
  
stage('Helm') {  
  steps {  
    script {  
      sh 'helm dependency build ./bitnami/wordpress'  
      sh 'helm upgrade --install final-project-wp-scalefocus ./bitnami/wordpress -n wp'  
    }  
  }  
}  
}
```

```

```

7. Explain the project directly in a README.md file in your project repo.

BONUS POINTS:

- Instead of using Minicube, consider using a different Kubernetes flavor of your choice, like k3s, k8s, microK8s for bonus points during the grading.

8. Send the URL of your Project repo on email to ana.zjovanovska@scalefocus.com & kiro.velkovski@scalefocus.com titled "Final Project Assessment for Scalefocus Academy".
